1 lb Best Coffee, none better	50c

BARNARD'S

CHURCH NOTES

Those who attended church in the village on Sunday were especially favored. At St. Mary's church, at 7:30 a. m., St. James' Boys' choir of 16 voices from Ferndale, Mich., furnished vocal numbers with violin accompaniment. The boys are camping at Lakeland and were very welcome guests at the local church. At the Congregational church, Miss Dorothy Wilson, daughter of Lucius E. Wilson, favored with vocal selections, much to the enjoyment of her hearers, while during the Sunday School hour, Miss Helen Irene Hume of Hollywood, Calif., who has recently returned from a trip around the world, and who was a week-end guest of Miss Clella Fish, gave an interesting and instructive talk on the Holy Land.

STEPHEN PETO

Stephen Peto aged 80 years, died suddenly at his home south of Pinckney July 22, 1926. He was born in Austria Hungary and came to this country 23 years ago, making his home in Detroit until three years ago when he came to Pinckney. The funeral was held from the home of Russell Bokrus Saturday, July 24, Rev. H. A. Maycroft officiating. Burial was in the Pinckney cemetery. The deceased is survived by his aged widow, on daughter, Mrs. Russell Bokrus, and three sons, Alex. of Dexter Stephen of Cleveland and Peter of Detroit.

Miss Loretta Dick of Crosswell is visiting Prof. and Mrs. J. P. Doyle. George Green and Ed. Drewery of Howell were in town one day last week.

Mrs. Fred Read entertained at bridge at her home last Friday evening.

Mrs. Ruel Caldwell gave a bridge party at her cottage on Tuesday afternoon.

Mr. and Mrs. Eugene Dinkle were dinner guests of Mr. and Mrs. Fred Evers Sunday.

Mr. and Mrs. John Culver of Ypsilanti were visitors at the home of the Misses Hoff, Monday.

Helen Tiplady spent Wednesday and Thursday at the home of Mr. and Mrs. J. D. Stackable Jr.

Mr. and Mrs. S. E. Swarouth spent the week end with Mr. and Mrs. Geo. Bradley at Linden.

Mr. and Mrs. D. D. Drummond of Grand Rapids were week end guests of Mr. and Mrs. H. W. Crofoot.

Mr. and Mrs. John Schneider and daughter Marilyn of Walkerville were Sunday guests of Mr. and Mrs. R. T. Read.

Mr. and Mrs. Harold Swarouth of Pinckney were Sunday guests at the home of his parents, Mr. and Mrs. H. H. Swarouth.

James Smith of the State Highway Department was an over Sunday visitor in Pinckney. He is now building a road near Adrian.

L. E. Smith and daughter Marjorie attended a picnic at Lake Orion, given by the Oakland County Press Association last Saturday.

Rev. and Mrs. M. L. Pearson of Orange, Calif., Mr. and Mrs. M. J. Burgess of Hartland were guests of Mrs. Arvilla Placeway last Wednesday.

Mr. and Mrs. Bert Hooker spent Sunday at the home of Harry Shankland at Dexter. Miss Elaine Shankland returned with them for a week's visit.

Mr. and Mrs. A. N. Hodgeman, Mrs. E. Jedele and daughter, Ruth, and Mary Bilby of Dexter called on Mrs. Elizabeth Curlett last Friday evening.

Mrs. Ross Read and Mrs. Fred Read were co-hostesses at a bridge luncheon which was given at the Read cottage at Baughn's Bluffs last Wednesday afternoon.

Margaret Moran, daughter of Mrs. Wm. Moran of Detroit died there this morning. The funeral will be held at St. Mary's church, Pinckney, Friday morning at 9:30.

Owing to the big rush of business Dr. C. L. Sigler has found it necessary to enlarge the capacity of the Pinckney Sanitarium. A two story addition is being constructed which consists of one large room on the first floor and two on the second. Will Jeffries is doing the concrete work and Mr. Foster of Gregory the carpenter part.

ALFALFA FOR AUGUST

Just received 25 bags of the Old Reliable Badger Brand Alfalfa in the following varieties:

Common South Dakota, No. 12
Canadian Variegated,
Black Foot Idaho Grim,
South Dakota Grim.
Homogerm, the high grade inoculation free with every bushel. Alfalfa should be sown not later than August 20th.
R.E. Barren, Howell.

"PLAN YOUR SAVINGS"

Nothing worthwhile can be done successfully without plans. No house can be transferred into a home without plans. Beautiful gardens are planned. Your future to be successful must be planned. Happiness can not last,—prosperity cannot become permanent without a plan. Adversity overtakes the man who is not prepared. Our Savings Department offers the best plan for providing for your future. Plan now to save regularly and stick to it.

FOR PLUMBING, HEATING

Tinning

See **JOHN GALLIGAN**

LICENSED PLUMBER, SOUTH LYON

Miss Veronica Fohey is visiting friends and relatives in Detroit.

Miss Lucy Hicks and Bertram Horning of Jackson visited Mr. and Mrs. W. Hendee Saturday and were dinner guests of Mr. and Mrs. Bert Hicks Sunday.

J. F. Dietrich who was badly injured near here recently in an auto accident is reported to be recovering but it is thought he will be permanently crippled.

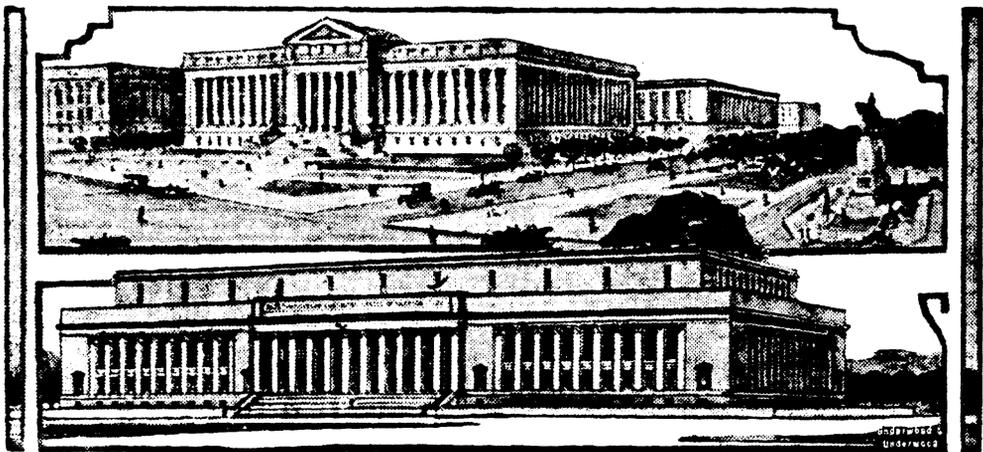

Floyd Peters and wife of Freeland, Nebraska has been visiting at the home of his sister, Mrs. Fred Read. Floyd is an instructor in the Freeland schools.

Elton Basing of Cedar Lake was a caller at the Dispatch office last Saturday. He reports a big rush of business and says there were 200 people there last Sunday.

Dunn's All Stars and McGraws of Jackson, the two base ball teams playing here at St. Mary's picnic are two of the fastest independent teams in the state and the game should be a good one.

The Misses Irma and Elaine Wegener of Madison, N. J., Mr. and Mrs. A. M. Andrews, Mr. and Mrs. Claude Wegener and Miss Ethel Perry of Detroit spent the week end with Mr. and Mrs. A. F. Wegener.

New Structures That Will Be Put Up in Capital

Among the new government buildings to be erected in Washington, as authorized by the \$50,000,000 building bill passed by congress, are the Department of Justice building (upper) and the Archives building to house the nation's historic documents (lower).

First Aid for Shock Described

Health Service Tells of Various Forms and Gives Treatment.

Washington.—A lesson in first-aid treatment for various forms of shock and the many meanings of the word are defined in a broadcast just sent out by the United States public health service. It is pointed out that a commonly accepted meaning of shock refers to a sudden and violent sensation such as might be produced by a plunge into icy cold water. Or shock may mean a sensation such as is experienced when the mind is suddenly agitated by a startling emotion, as a shock of grief or fear, or of fright at witnessing a grave accident.

The term shock as used by physicians usually refers to graver conditions than those just mentioned, and particularly to that more or less profound prostration of the bodily functions following sudden injuries and after very extensive surgical operations. Electric shock is still another form of this often serious and even dangerous condition.

"In general, shock may be defined as a sudden, vital depression which may be mild in degree or which may be serious, even fatal, in its consequences," says the service. "The severer degrees of shock are dangerous and the condition, even when slight, should always be given prompt attention."

"When a person is suffering from shock, his face is pale and has an anxious expression; the eyelids droop, the eyes are dull and the pupils large; the skin is clammy and covered with cold perspiration; the victim is somewhat stupid in appearance and takes little interest in the things about him. He may suffer from nausea and vomiting. He may answer questions slowly. He may be partly or totally unconscious, or his mind may wander. Usually he is perfectly quiet and will not move unless disturbed. Breathing is shallow and feeble; the pulse is rapid and weak, and may not be perceptible at the wrist.

"Let us outline briefly the treatment of shock in general. When the condition of shock is observed send for a doctor at once. Pending his arrival place the person in a comfortable position, with his head low, unless there is a fracture of the skull or severe hemorrhage from blood vessels of the head or face. Remove from the patient's mouth all foreign bodies, such as false teeth, tobacco or gum. Wrap him in warm blankets or in warm clothing. Place well-wrapped hot-water bottles around the patient.

General Treatment.

"A light hot-water bottle, wrapped in cloth or paper and placed over the heart, is a good stimulant. If he is conscious, give aromatic spirits of ammonia—a teaspoonful in half a glass of water, moderately hot coffee, hot tea or hot water. If the patient is unconscious do not give him anything by the mouth, but pour aromatic spirits of ammonia on a cloth and place it under his nose. This should be tested by the person rendering assistance by holding it under his own nose before giving the treatment to the patient to be on the safe side.

"Although shock is dangerous and commonly follows injuries, it must not be forgotten that the person suffering from shock may require treatment for something still more dangerous; as, for example, severe bleeding, which must be checked.

"We come now to a special form of the condition we are discussing termed electric shock. Electricity causes shock by paralyzing the nerve centers that control breathing or by stopping the regular beat of the heart. The symptoms of electric shock are sudden loss of consciousness, absence of respiration—or if respiration is present, it is slight and cannot be observed—weak pulse and burns at the point of contact with the conductor of electricity.

"The first thing to do in the treatment of electric shock is to get the patient off the live wire or otherwise break the contact of the electric cur-

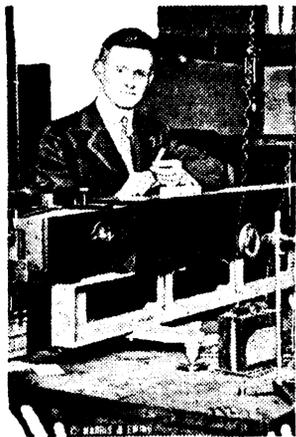

rent as quickly as possible, if this has not been done already.

"One must be extremely careful not to touch the patient or the wire with the bare hands, or otherwise make contact with the electric current. If one has a pair of rubber gloves, or even one rubber glove, the victim may safely be pulled away from the contact with the current, or if there is a switch near, the current may be turned off, but no time should be lost in looking for one.

"Another way to break the current is to take the belt, handkerchief, coat or a piece of dry rope and loop it over the victim's foot or head if he is lying on the wire, and thus pull him off. If an ax is near at hand it may be used to cut the wire, but first one should make sure that the handle is dry or else wrap it with a coat or other non-conducting material before attempting to use it; or one may use a dry board, a dry cloth or a dry rope to pull the wire away from the patient. Do not grasp the wire with the hand even when protected by a dry cloth, as this may be serious.

"As soon as the patient is freed from the wire and removed from danger of further contact with it, artificial respiration should be begun at once."

LATEST OF ELEMENTS

Two tiny medicine bottles which are now being guarded jealously by the bureau of standards contain the only specimens of hafnium in the United States, the latest of the officially recognized elements to be discovered. They were received a short time ago from the laboratory of the Danish physicist Bohr, in Copenhagen, where the element was isolated in 1923. In this photograph Dr. W. F. Meggers, of the bureau of standards, is shown examining the spectrum of hafnium.

Finds Tobacco Smoke Spurs Powers of Rats

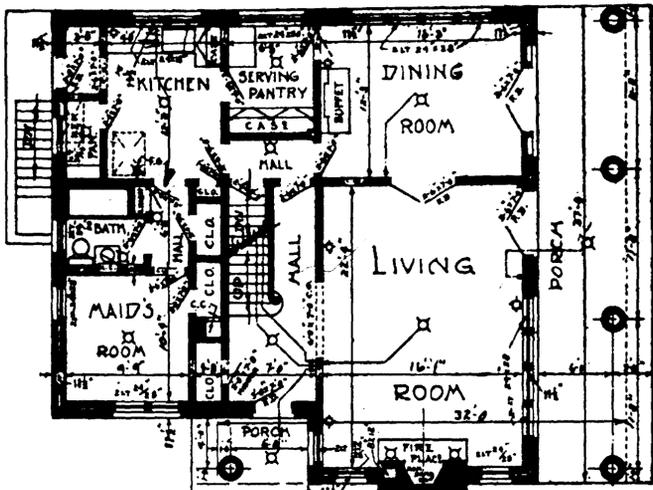

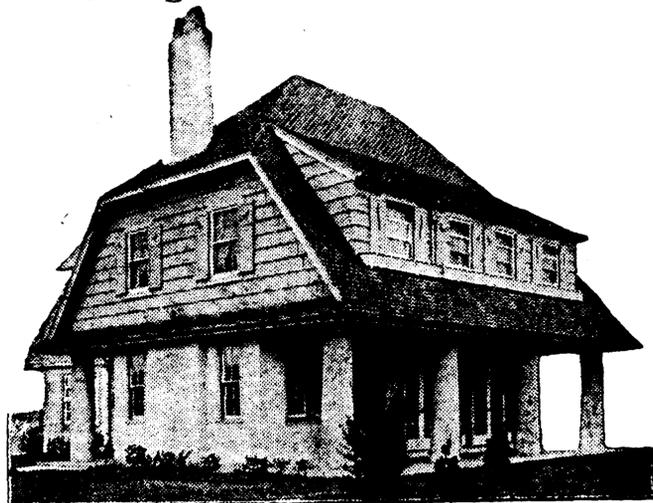

Berkeley, Calif.—Tobacco users may eventually know the exact effect that indulgence in their favorite weed produces when the experiments now being conducted by Miss Hazel Field of the physiology department of the University of California are completed.

Using rats to test the effect of tobacco, Miss Field has devised an elaborate system of cages and pipes, and keeps records showing what happens to a rat after a "smoke." Pennsylvania leaf tobacco was used throughout the experiment and by using clay pipes and an intermittent system of drawing the smoke through to the cages a typical puff is produced which simulates human smoking.

Miss Field observed that rats, unlike human beings who are learning to smoke, experience no ill effects. After the first few trials the rats seemed to enjoy smoking.

One of the most outstanding results of the experiment, according to the physiologist's report, was that the amount of stimulation produced was marked. After smoking, the rats became unusually active.

Attractive and Well Arranged Home of Eight Rooms for Large Family

First Floor Plan.

By WILLIAM A. RADFORD

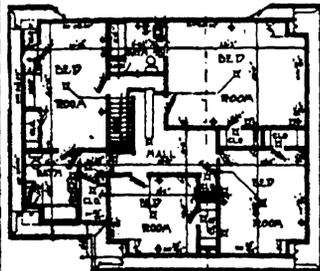

Mr. William A. Radford will answer questions and give ADVICE FREE OF COST on all problems pertaining to the subject of building, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on the subject. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

In spite of the vogue of small compact houses, there are still many families which require a rather large house, one which has a number of bedrooms and plenty of space for the large family. But even such a family wants as compact an arrangement as is possible in order that the care of the house may not involve too great an amount of labor and the construction cost may not be too great.

An unusual amount of space is available in this eight-room house, and it is conspicuously well arranged. There is an entrance from the grade-level porch directly into the living room, but a second entrance at one side opens into a reception and stair hall from a second and smaller porch. The living room and dining room extend across the front of the house. Back of these are service arrangements. These include the kitchen with a large serving pantry, separated from the dining room by a short hall, and the maid's room with separate bath. The latter rooms are also separated from the kitchen by another short hall in a most satisfactory manner.

In addition to a closet in the maid's room, there is also a closet in the adjoining hall, a small closet off the kitchen, and a coat closet in the reception hall. Besides the large serving pantry there is a smaller pantry for the refrigerator off the kitchen, and of course a rear entrance through an entryway.

The stairs lead from the reception hall to a central hallway on the second floor. Here we find four full-

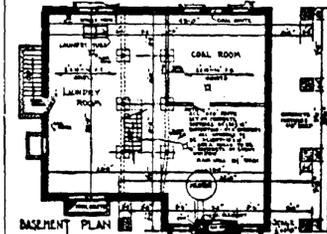

Second Floor Plan.

sized bedrooms and two bathrooms. The provision of closets on this floor is most complete. Each of the three bedrooms has a large closet, while the fourth bedroom has two closets. This latter room is also provided with an attractive window seat and opens into one of the bathrooms. This bathroom may also be reached from the hall, and adjoining it is a large closet. At the other end of the hall

is still another closet, while a linen closet is provided in the second bathroom.

Each of the bedrooms has windows on two sides and excellent cross ventilation is possible. While all are of good size, one is an exceptionally large bedroom, measuring 16 feet 11 inches by 22 feet 3 inches, and the second bathroom opens off this large bedroom.

A conspicuous and important feature of this home is the very complete electric wiring which has been provided. It is truly an electrical home, lights being provided at every desirable point even to those inside the closets. There are also conven-

Basement Plan.

ience outlets to care for all the electrical appliances which are considered almost a necessity in the modern home and which do so much to relieve the labor of housekeeping.

In exterior appearance this home gives an impression of strength and permanence, not only because of the low foundation line and the roof lines, but also because of the solid pillars which support the porch roof. This roof is formed by the overhang of the second story, but heaviness is avoided by the use of the dormer on the second floor. In finish the walls are of stucco up to the second floor, and above they are of shingles laid wide to the weather.

The chimney, too, is of stucco finish as are also the porch pillars. Double hung windows have been used and the upper ones are equipped with shutters which add much to the general effect. With the background of trees and the well-planned planting of shrubbery, the whole effect has been enhanced, demonstrating the importance of the landscaping as the finishing touch to the well-planned home.

Concrete Forms

Spruce and Norway pine are acceptable for making forms for concrete and are reasonable in cost. For form work which requires great precision, such as window-sills and lintels and other pieces of ornamental concrete, white pine will be found the best lumber to use.

Slip-Proof Tile

Stair tile that is slip-proof should be used wherever hard service is called for or there is slip hazard. Thoughtlessness here may cause an unfortunate accident.

He's the Golden Rule Ambassador

Bearing the title of "Golden Rule Ambassador From the United States to the Holy Land," T. A. Swayze of Tacoma, Wash., visited the White House to see President Coolidge before departing on his unique mission. Mr. Swayze was chosen by the Near East Relief. He is shown above at left with Representative J. W. Summers of Washington.

RADIO

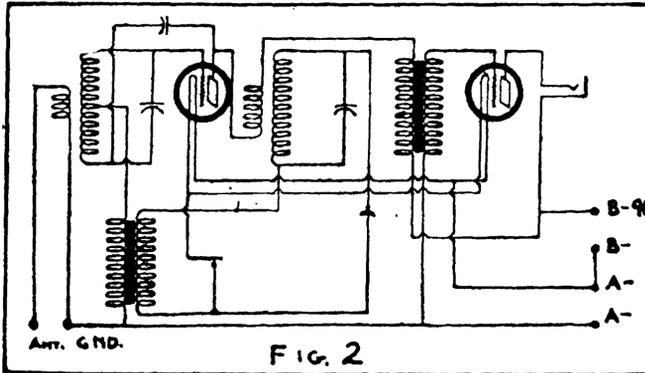

Diagram of Circuit Employed in a Center-Tapped Coil on the Radio-Frequency Stage.

By R. S. DORNBROCK, In the Chicago Evening Post. It is the purpose of the writer to herein point out the application to a well-known type of reflex circuit of a circuit modification long known but little used.

This is the use of a center-tapped coil in the radio-frequency stage, the lower terminal of which is connected to one of the small midget condensers, the opposite side of this midget condenser being connected to the plate terminal of the tube.

This circuit modification is probably most used in certain superheterodyne circuits, wherein a center-tapped loop is employed in connection with

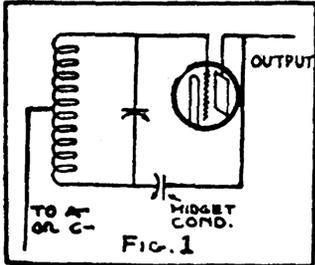

Diagram of Circuit Modification is Here Shown.

the midget condenser "to obtain regenerative action." Then again we see circuit diagrams showing the same arrangement in a tuned radio-frequency circuit, where it is described as "the Rice method of neutralization."

Cuts Out "Blanket" Stations.

A diagram of this circuit modification is shown in Figure 1. Whatever its action, the point is that it exerts a most beneficial influence upon the reflex circuit.

In the circuit set up by the writer, selectivity was very greatly increased, local stations which covered from 15

to 25 degrees in the regular arrangement were made to cover only 4 or 5 degrees on the dial. This was in a location about ten miles from the nearest station, and on an antenna 100 feet long with 85-foot lead-in.

In another location nearer to the bulk of the stations, and on an antenna 75 feet long with 80-foot lead-in, locals were confined to 2 or 3 degrees on the dial, excepting one which was only a few blocks away. This station operates on 250 meters, and blanketed about everything below it on a straight-line frequency condenser, but slightly below 800 meters even this station could be entirely eliminated. All stations above were received excellently.

Tap Is Only Change.

A diagram of the circuit employed is shown in Figure 2. Nearly every one possessing a set employing the circuit which is shown modified in this diagram will recognize it. It has been very popular and the modification outlined in this diagram will help it perform more efficiently in an area where a great majority of sets will pick up at least a couple of stations at once. This circuit is noted for its great volume and low operating up-keep, but in its original form tunes a little too broadly for efficient service.

No information of a technical nature is given, as those of the listening fraternity who do their own tinkering will understand from the diagram exactly what is to be done. No changes in apparatus need be made excepting to bring a center tap from the antenna tuning coil secondary.

Controls by Midget Condenser.

The midget condenser should be located on the panel, since it provides an excellent volume control.

Incidentally, the writer has observed in very recent issues of various radio magazines that this method of controlling radio-frequency is being quite frequently advocated.

Your Grid Leak and Its Important Duty

The action of the grid leak seems to be little understood by the average fan. Great care may have been taken in wiring up the set and in buying the best of parts. Yet when the receiver is put into operation the results secured are very poor. Very often the whole trouble lies in the grid leak, which may not be of the correct value or may be noisy in operation.

To make the action of the grid leak clear we will compare it to the carburetor on an automobile. The carburetor vaporizes or breaks up the gasoline, then mixes it with a certain proportion of air to form an explosive mixture. The supply of air taken into the carburetor is regulated by a choke valve. The carburetor of a radio receiver is the detector tube and the choke valve is the grid leak.

If the choke valve on the carburetor is closed too much, it does not allow enough air to enter and makes the mixture rich with the result that the motor chokes up or may stop altogether. If the grid leak is of such a value that it allows too high a negative charge to accumulate on the grid the tube chokes or paralyzes and the set will not operate or operates very poorly. This is the same effect as when the choke valve on the carburetor is closed too far and does not allow enough air to enter.

If, on the other hand, the grid leak is of such a value that the negative charge on the grid leaks off too rapidly the receiver loses its sensitivity. You can readily see, therefore, that it is important that the size of the grid leak be correct so that the amount of energy the grid can handle is always just right. Use a good-quality grid leak. Secure three or four different sizes and try them out until you find one that gives the best results. Do not try to save money by buying a cheap grid leak or one made by an unknown manufacturer, for very often a poor grid leak is the unsuspected cause of poor or noisy reception.

When the Tubes May Be Cause of Your Trouble

When you notice that your radio set is losing in volume, the distant stations fade and disappear, and the quality sounds like a rock crusher, what do you do?

Very likely you look for poor connections, test the batteries or possibly replace them, change the tubes around, add a "C" battery and juggle grid leaks. And to discover? Probably, that the quality remains as poor as before. What next?

Under such perplexing circumstances did you ever give the tubes a thought? Tubes do not last indefinitely. Gradual deterioration of their filaments ultimately results in poor reception. The filament of a tube may still burn, but the coating put on its surface to aid emission of electrons—those tiny particles which give the tube its "life"—eventually disappears. When the coating vanishes the radio set loses its sensitivity and volume and may become very noisy. It is then time to buy new tubes.

When Buying Your "B" Battery Eliminator

It is important when buying a "B" battery eliminator to determine whether or not the device is capable of supplying enough current to operate the set, for if it does not distortion will result. To test the capacity of a "B" battery eliminator connect it to the receiver with which it is to be used and connect a high resistance voltmeter across its terminals. If, when a loud signal is tuned in, the pointer of the voltmeter remains almost stationary at a voltage which is sufficient to properly operate the set, the device will prove satisfactory.

Prevents Damage

Ammonia or soda water, quickly applied, will prevent damage from acid dropped while taking a hydrometer reading of the "A" battery.

Sweet Clover Is Best for Forage

More Valuable for Pasture and Green Manuring Than for Hay Crop.

(Prepared by the United States Department of Agriculture.)

The recent sudden increase in the growing of sweet clover in the northern United States has brought many inquiries to federal hay inspectors and to hay dealers regarding the marketing of baled sweet-clover hay. The acreage of sweet clover available for harvesting this year is the largest ever known, while the heavy plantings that were made this spring will result in sweet clover being one of the leading forage crops in the country in 1927. Most of this sweet clover will be used for pasture or for plowing under. Some of it, however, will be cut for hay, and the surplus above farm requirements will be offered for sale.

Hay Not in Favor.

Sweet-clover hay is not held in high favor in the leading hay markets and dealers report much difficulty in disposing of the sweet-clover hay consigned to them. The United States Department of Agriculture reports that no official standards or grades have been established for sweet-clover hay and that no such grades are contemplated for the immediate future.

The very evident lack of market interest in sweet-clover hay is due to the fact that hay from this crop heretofore offered for sale has been of very low quality and of poor condition. Practically all of it has consisted of an unattractive mass of coarse, woody stems, almost devoid of leaves and fine stems, often badly weathered or moldy, and obviously of low feeding value. The principal buyers of legume hays, including the clovers and alfalfa, are dairymen, and these demand hay that is fine-stemmed and leafy, sound, and of good color and of high palatability and feeding value. Sweet-clover hay may be so produced as to have all of these characteristics, but the type of hay usually placed on the market would be largely wasted if fed to dairy cows. Most buyers will not consider it even for bedding.

Cause of Poor Quality.

The cause of the poor quality of sweet-clover hay lies partly in carelessness in harvesting and partly in the nature of the crop itself. Sweet clover is a biennial plant, making a moderate growth the first year and a very large and rapid growth the second spring. Most of the hay is made from the second-year crop. When harvested at the right time this second-year sweet clover will make very good hay if properly cured, but the curing and storing of sweet clover so as to obtain good quality hay is very difficult. The harvesting must be done just as the flower buds are forming, and the interval during which this occurs is usually not more than three or four days. If cut too early the crop is too succulent and almost impossible to cure without spoiling. If cutting is delayed until the flowers appear the stems become overripe. Such stems are coarse and very fibrous and dry so slowly in the swath that most of the leaves wither and fall off before the hay can be put into the barn. If

the sweet clover is stacked or placed in the mow at that stage of curing when the leaves are clinging to the stalks, the stalks will be so sappy as to start a strong ferment that often turns the hay musty and moldy. Unfortunately, the harvesting usually comes at a season of frequent showers and at a time when farmers are too busy to watch the sweet clover closely. As a result very little second-year sweet-clover hay is saved in good condition. Recent investigations have disclosed, furthermore, that second-year sweet-clover hay, which for any reason has become spoiled, is likely to cause severe and often fatal poisoning of cattle. The trouble is thought to be due to a fungus or mold which develops on the inside of the hollow stems.

All of these conditions may be improved somewhat by planting the yellow sweet clover or one of the early white varieties, like the Grundy County, instead of the common white species. In general, however, second-year sweet clover hay is being looked upon with increasing disfavor. Although it may be used in an emergency for home-farm use it should not be cultivated to compete with alfalfa and red clover as market hay.

First-Year Cutting.

A good word should be said, on the other hand, for sweet-clover hay cut the first fall following a spring planting. In a good season and on moist soil one and sometimes two cuttings of excellent hay may be obtained in August and early September. This hay is fine-stemmed and leafy, of first-rate appearance and feeding value, and comparable in every way to good alfalfa hay. In fact, it has been offered on one market as "near alfalfa." The only objection to first-year sweet-clover hay is the grain stubble which it may contain, if the seeding is with a nurse crop.

This can be avoided by planting the sweet clover alone or by cutting it higher than the stubble. Cutting should take place not later than the middle of September, since much food material in the stems and leaves, including the valuable protein, is carried to the roots in late fall for storage over winter.

The value of sweet clover for pasture and green manure is very great. In these respects the crop is unexcelled. The utility of the crop for hay is doubtful, especially for market hay, when it must compete with such well-known legumes as alfalfa and red clover.

Pack in Light Room

Always pack eggs in a light room. This allows for the detection of any that are thin-shelled or have cracks. Eggs are sometimes found which have shells that were cracked before they were laid. They have been partly repaired but the cracks still show. An egg of this kind is easily overlooked in a dark room but may be seen in the light. It pays to pack a uniform product. If there are two grades, keep the good and the poor separate, otherwise you may get the low price for all of them.

SOME VISIBLE SIGNS OF BINDER TROUBLES OUTLINED BY EXPERTS

Nebraska Experts Give Few Good Pointers.

According to farm machinery experts at the Nebraska Agricultural college, a careful observation of the following "ifs" will secure better operation and less trouble:

1. If the machine travels with a jerky motion, main drive chain is too loose or it may be dry. Try a little oil on it.
2. If the slats rip off the canvas, the elevators are not square.
3. If the knotted hook is rusty and rough, it will not work properly. Polish it with fine emery paper.
4. If the binder attachment is not timed properly, it will not work. Some binders are timed in as many as five places.
5. If the knotted hook does not turn far enough to close the fingers on the twine, no knot will be tied. Look at the knotted pinion. It should not be worn.
6. If the twine slips through the cord holder, the twine will be pulled out before the knot is tied. Adjust the cord holder spring. It should take 40 pounds to pull the twine from the disk.
7. If the disk does not move far enough, the knotted hook grasps only one cord, hence a loose end band.
8. If the needle is bent or out of shape, there will be a loose end band.

The needle is of malleable iron and may be hammered back to shape.

9. If the twine is pulled from the hook before the knot is tied, try the knife, it may be dull.

10. If you wish to change the size of bundles, do it with the bundle-sizer spring, not the tension or compress spring.

How Are Calves Raised Profitably for Market?

Many farmers think that at the present price of milk and veal, it does not pay to produce veal, therefore, many calves are "deaconed." On the average it will take ten pounds of milk to produce one pound of gain in a calf. If milk is \$2.00 per hundredweight, then every pound of gain costs 20 cents. If it were not for realizing on the original weight of the calf, every pound of veal would be produced at a loss. Suppose a calf weighs 75 pounds when it is born, and by feeding it to marketable age you increase its weight to 150 pounds. You have increased its weight 75 pounds, and it has taken at least 150 pounds of milk, worth \$15. You sell the calf for 14 cents a pound, or \$21. You have realized \$6 for the original weight of the calf, less the expense of feeding and the cost of marketing, for had you "deaconed" the calf you would have received nothing for the carcass, except, possibly, 50 cents for the hide.

TWO WOMEN FOUND HELP

By Reading Experiences of Other Women

Mrs. Nina Matteson, Box 206, Oxford, N. Y., writes—"If it had not been for your medicine, I could not have done my work as it should have been done. Mother told me of Lydia E. Pinkham's Vegetable Compound, and I had read in different papers what it had done for different women. She wanted me to try it, so my husband got me one bottle at first; then I took two others. Now I am feeling quite strong again."

Mrs. Ernest Tanguay of Adams, Mass., says she was ill for four years and could not sleep nights or go out on the street. She read about the Vegetable Compound and decided to try it. After taking eight bottles she was able to do all her work and go anywhere and is quite herself again.

This dependable Vegetable Compound is a household word in thousands of homes. The fourth generation is now learning the merit of Lydia E. Pinkham's Vegetable Compound.

For more than half a century, this reliable medicine has been used by women with very satisfactory results. If the Vegetable Compound has helped other women, why shouldn't it help you?

Clair de Lune

A new job was sent aloft one night with strict orders to report all lights—all lights, it was emphasized. As soon as he lit the crow's nest he sang out:

"Light ho, sir. Two points off the starboard bow."

The officer screwed the glass in his eye and scanned the horizon. Not being able to raise anything, he asked:

"Can you make her out?"

"Yes, sir."

"Report her."

Stunned Fish With Clubs

Caddies at the Napoleon (Ohio) Golf club enjoyed a fish fry recently. The recent heavy rains had backed the water from the river into the creek in the golf grounds, says the Toledo Blade. With the water came an abundance of carp. Caddies armed themselves with golf clubs and drove at the carp until they were stunned and then they were taken home ready for the frying pan.

Not at All

"You saw that play? What did you think of it?"
 "Oh, I liked it, but really, it is hardly a play to which a girl could take her mother."

ALLEN'S FOOT-EASE

Stops the pain of Corns, Bunions and Calluses.
 Before putting on your shoes, sprinkle into them some Allen's Foot-Ease and walk all day. It gives immediate relief. Allen's Foot-Ease the Anti-Septic, Healing Powder for the Feet, takes the friction from the shoes and gives rest and comfort. Always use it for breaking in new or tight shoes. Sold by all drug and department stores. Trial Package and Allen's Foot-Ease, 1c Box, N. Y.

ABSORBINE
 will reduce inflamed, swollen Joints, Sprains, Bruises, Soft Swollen Soles, Blisters, Itch, Burns, Scalds, Frostbite, etc. It is a positive antiseptic and germicide. Pleasant to use. Does not blister or remove the hair, and does not work the hair out. 25c per bottle. Sold by all drug stores.

TOMATOES EASIEST VEGETABLE TO CAN

Tomatoes May Be Canned in Glass or Tin.

(Prepared by the United States Department of Agriculture.)
Tomatoes are the easiest of all vegetables to can at home. Because they contain as much acid as many fruits and are very juicy, tomatoes can be processed by the water-bath method at the temperature of boiling water. Other vegetables are not so acid and therefore need to be processed under pressure at a temperature higher than 212 degrees Fahrenheit. From the standpoint of health and appetizing meals it is lucky that tomatoes are so easy to can at home. Canned as well as fresh, they are one of the richest of all vegetables in vitamins. They add flavor, color, and food value to every course from soup to salad. Furthermore, almost every home garden yields a surplus of tomatoes which can be transferred from vines to cans under ideal conditions.

In a new publication on home canning, Farmers' Bulletin 1471-F, the United States Department of Agriculture gives the following directions for

canning tomatoes: Select firm, ripe tomatoes of medium size and uniform shape. Do not use tomatoes which are overripe or parts of which are spotted or decayed. Put them into trays or shallow layers in wire baskets and dip in boiling water for about a minute, according to ripeness. Remove and plunge quickly into cold water for an instant. Drain at once, and core and peel promptly. Pack into jars or cans as closely as possible. Or better still, bring the tomatoes to the boil in an open kettle and pack them hot into the containers. For home use the jars may be filled with a thick tomato sauce or with the juice of other tomatoes. If the tomatoes are to be sold under federal regulations, add only the juice which drains from them during peeling and trimming. Season with one teaspoonful of salt per quart. Process quart and pint glass jars for 45 minutes in boiling water, counting the time when active boiling begins, and No. 2 and No. 3 tin cans for 85 minutes.

the... have more than one, but the date on which it was canned, and the time and temperature of processing. For example, the label on a quart jar of string beans might read: "String beans—Kentucky Wonders, 7-15-26; packed hot, processed at 240 degrees F. (10 lbs.) for 40 minutes."

If you are canning in tin, watch for leaks when the cans are plunged in cold water to cool as soon as they come from the canner. Air bubbles will indicate imperfect sealing. Or if

Invert Glass Jars Immediately Upon Removal From the Canners, Cool to Room Temperature and Keep Under Observation for at Least a Week.

you are using glass jars, invert them immediately after processing and look for signs of leakage. All leakers should be opened at once and the contents used on the table or heated, re-packed in other jars, and processed again as at first. Hold all canned products at room temperature for a week or 10 days, where they can be examined at least once a day to be sure that they are keeping.

If the contents of any jars or cans show signs of spoilage, examine all of that lot carefully. After this observation period, store the canned goods in a cool place.

Around Orchard

SUMMER PRUNING IS LOGICAL PLAN

Summer pruning, which consists in pinching and disbudding, is the most logical method of directing the growth of trees. When proper attention is given to this practice amputation of branches will be unnecessary and the consequent injury incident to pruning will be eliminated.

The perfection of summer pruning provides for the complete control and disposition of growth without involving any material removal of foliage. When the extreme terminal bud of a growing shoot is removed growth in that direction will be checked without injury to the plant. The vitality of the plant is then distributed properly without being wasted in the production of wood that is to be cut away the following winter. However, rude and careless destruction of summer foliage, like the cutting away of long shoots on a grapevine, will often lead to injury. It is certain that full and perfect maturity depends on a full growth of healthy, matured foliage.

When the terminal bud of a branch is pinched out it not only arrests growth in that direction but induces the development of lateral shoots where a more active extension is needed. Disbudding may also be extended to include any superfluous buds, flowers or shoots at any place on a stem or branch in order to divert sap into those which are stronger and are required to remain either for the production of branches, fruits or flowers of superior quality and size. This must always be done in early stages of growth before the shoot removed has developed to any great extent.

The branches of figs, peaches and vines are usually so full of young shoots and fruit buds in early spring that if all were allowed to remain the result would be a dense thicket of useless branches. Many of such shoots do without further attention from the grower, but any useless growth will be made at the expense of the ripening fruit or the remaining wood.

By keeping in mind the principles of summer pruning the difficulties in proper training of an ornamental hedge will be largely eliminated. It is the pinching back of strong, upright branches that makes a dense hedge, with numerous lateral branches near the ground. Neither California privet nor barberry should require much winter pruning after the first year.

Producing Apples of High Color Most Profitable

Apples that are high in color sell themselves readily. Wise apple growers will handle their orchards that they will produce apples of the highest color. Prof. F. C. Sears, head of the department of pomology at the Massachusetts Agricultural college, recently outlined five methods by which apples with high color can be produced.

"First, keep the tree open enough to let in sufficient light. Second, space the trees widely enough in the orchard so that they may get plenty of light; or if fillers have been used, remove them before they crowd so much as to give poor color. Third, use fertilizers more carefully so as to obtain the proper degree of growth for good color without too much foliage. Fourth, adapt our varieties to our soils in order to get the best color. One soil will give highly colored Baldwins, but poorly colored fruit of some other variety. Fifth, thin the fruit.

"Color is chiefly dependent on maturity and sunlight. To get good color, maturity should be hastened by avoiding the use of undue amounts of nitrogenous fertilizers, by sod culture where practicable, by stopping cultivation early, and by using large-growing cover crops. Utilizing sunlight to the best advantage involves pruning to open up the tree and thinning to expose surface to the sun."

Control Currant Aphids by Use of Spray or Dust

Currant aphids, while not generally a serious pest, may be readily controlled should they become troublesome, by the use of spray or dust mixtures containing the necessary quantity of nicotine, the fumes of which are toxic to insects of this sort. Often one application will suffice.

Liquid sprays containing one pint of nicotine sulphate to 100 gallons of spray mixture and dust preparations carrying from 1 to 2 per cent nicotine proved about equally effective against currant aphids in spray tests.

A safe and efficient spray mixture is recommended as follows: Nicotine sulphate, one pint; soap, five pounds, and water, 100 gallons. This should be applied under high pressure and should wet all the surfaces of the foliage thoroughly for best results.

Shrinking Wash Goods

Shrinking goods before making up is less necessary now than formerly because most garments do not fit so closely. It is objectionable in that it takes the original finish out of the garment. No wash material stays clean and fresh as long after it has once been laundered. If the material is left in its original folds and immersed in the bathtub in boiling water, it may then be lifted out and dried over a broom handle so as to make ironing almost unnecessary.

Unbreakable Ax

With head and handle of steel, forged and tempered in one piece, a handy new ax is by its very construction, unbreakable, says the Popular Science Monthly. The handle cannot work loose and come out, so there is no danger of the head's flying off. A hand-hold of leather gives a firm grip, and the hand does not come in touch with the cold steel. This steel ax is said to be lighter in weight than the usual wooden-handled ax.

Two unusual features of this sturdy ax are a hook on the head that is useful for drawing out staples, and a claw at the end of the handle for pulling nails. Its head, of course, can be used for hammering.

Northwestern Yeast Co. 1730 North Ashland Ave. Chicago, Ill.

Do flies like your cooking?

REMEMBER, flies are more than troublesome. They come from filth to food. Get rid of them with Flit.

Flit spray clears your home in a few minutes of disease-bearing flies and mosquitoes. It is clean, safe and easy to use.

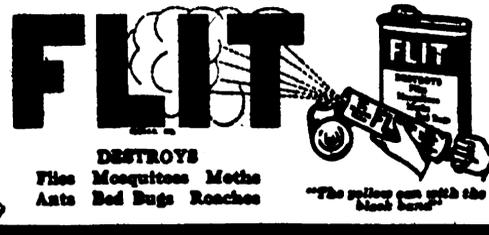

Kills All Household Insects

Flit spray also destroys bed bugs, roaches and ants. It searches out the cracks and crevices where they hide and breed, and destroys insects and their eggs. Spray Flit on your garments. Flit kills moths and their larvae which eat holes. Extensive tests showed that Flit spray did not stain the most delicate fabrics.

Flit is the result of exhaustive research by expert entomologists and chemists. It is harmless to mankind. Flit has replaced the old methods because it kills all the insects—and does it quickly.

Get a Flit can and sprayer today. For sale everywhere.

STANDARD OIL CO. (NEW JERSEY)

POULTRY

FATTEN BROILERS FOR MARKETING

For the most part, farmers and poultry raisers who keep Leghorn chickens pay most attention to the production of eggs. They think of eggs as the chief end of poultry keeping. My experience has been that by paying a little more attention to the fattening and marketing of Leghorns, the income from this source can be considerably increased, says a writer in the Successful Farming. Especially is this true when marketing broilers. Leghorn broilers fatten easily when confined and force fed for about two weeks. They will consume about two pounds of feed during this time and should show a gain in weight of one-half to three-fourths of a pound.

There are two methods which I have employed in fattening broilers. These are pen and crate fattening. The simplest and most logical method for farm conditions I have found is pen fattening.

Following this method, the birds are confined in small pens when about one and one-half pounds in weight and are fed the following mash: 25 pounds cornmeal, 15 pounds middlings, 8 pounds meat scraps, and one-half-pound salt. This is fed as a wet mash by adding sour milk, buttermilk, or skim milk. The birds are fed this mash three times a day and are permitted to eat for half an hour at a time, when the uneaten portion is removed. It is important that the intervals between the feedings should be as nearly equal as possible.

The object of feeding this wet mash is to get the birds to eat large amounts of food so they will make maximum gains in the shortest time.

Corn meal and milk in any form should be the foundation of any good fattening mash. It should also be remembered that when milk is used in fattening fowls, not a too large amount of meat scraps should be used.

One reason for the wide spread in prices paid for Leghorn broilers and those of the heavier breeds is because the Leghorn, being more active, will not take on flesh as readily as the heavier breeds when on free range.

Roosters Can Be Sold

Now, Says J. H. McAdams

Now that the incubation period is over there is no further need for roosters in the flock and all but one or two of the best male birds can be sold, advises J. H. McAdams, extension poultryman at the Kansas State Agricultural college. Every flock owner knows, according to McAdams, that the male bird is unnecessary so far as the production of market eggs is concerned. Male birds now represent just so many extra mouths to feed, he says.

The hitch to selling male birds comes largely from the price consideration, according to McAdams, who says that when these birds were purchased last fall or early winter they were valued from \$2 up to possibly \$10 each. Today with old roosters commanding 16 cents a pound an exceptionally high price prevails, but as soon as the old roosters start moving to market the price will drop probably to about 10 cents a pound.

"Even though old roosters were such a drug on the market that he could not sell them at all, no farmer could afford to keep them in his flock," McAdams warns. "To live, a rooster must eat and the feed bill on each individual one will be at least 10 cents a month, making a total cost of at least 80 cents to hold the old birds over until February."

Poultry Hints

The results of chickens eating carbon or spoiled feed are limberneck or indigestion.

Egg eating is a vicious habit and the best method to combat it is the slaughter of the offending birds.

Convenience for both hens and caretaker should be considered—convenience means cleanliness and cleanliness means health.

A laying hen is about the only example of a going concern that can sit still and yet produce dividends.

The first quality that makes for success and profit in the poultry flock is vigor, vitality or constitution. Choose your own name for this quality.

A chicken that is liberally fed does not, as a rule, exercise enough to run off flesh but only enough to keep in good general health and to have a good appetite.

"BAYER ASPIRIN" PROVED SAFE

Take without Fear as Told in "Bayer" Package

Does not affect the Heart

Unless you see the "Bayer Cross" on package or on tablets you are not getting the genuine Bayer Aspirin proved safe by millions and prescribed by physicians over twenty-five years for

- | | |
|-----------|------------|
| Colds | Headache |
| Neuritis | Lumbago |
| Toothache | Rheumatism |
| Neuralgia | Pain, Pain |

Each unbroken "Bayer" package contains proven directions. Handy boxes of twelve tablets cost few cents. Drug-gists also sell bottles of 24 and 100.

Finish of Trick Left

Parrot Still Curious

A sailor, home from a voyage, went, accompanied by his parrot, to a local music hall. A conjurer came on.

"That's a good trick," said the sailor; "I wonder what he'll do next."

The conjurer did even better.

"That's a good trick," said the sailor; "I wonder what he'll do next."

The conjurer did his masterpiece.

"That's an excellent trick," said the sailor; "I wonder what he'll do next."

As he spoke he lit his pipe and threw the match through a side door, where it ignited a pile of explosives.

When the smoke had cleared away, theater, sailor, audience—all had vanished. Three miles off on a church spire, featherless and blackened, sat the parrot, saying, "That's an excellent trick! I wonder what he'll do next."

New "Long Distance"

The telephone line between Fort William, Port Arthur and Winnipeg, was opened in May, thus inaugurating a new long-distance telephone service in Canada.

Ends pain in one minute CORNS

One minute—that's how quick Dr. Scholl's Zino-pads end the pain of corns. They do it safely. You risk no infection from amateur cutting, no danger from "drops" (acid). Zino-pads remove the cause—pressing or rubbing of shoes. They are thin, medicated, antiseptic, protective, healing. Get a box today at your druggist's or shoe dealer's—35c.

IN THE LEAD

Fisher's engineering experts—skilled beyond their calling by virtue of years of continuous research and experimentation with all types of body construction—unhesitatingly aver that none but Body by Fisher—exclusively used by General Motors for Cadillac, Buick, Chevrolet, Oakland, Oldsmobile and Pontiac cars—affords the essential virtues of safety, beauty and comfort which characterize every Fisher product. Quite logically the public knows that when any improvement which really gives an enhanced measure of safety, comfort and luxury is perfected, Fisher will be the first to present it just as Fisher has created and been the first to present every important improvement in body design and construction of the past decade.

P. H. SWARTHOUT
FUNERAL HOME
PHONE NO. 39
PINCKNEY MICHIGAN

STATE OF MICHIGAN, the Circuit Court for the County of Livingston, in Chancery.

Gladys Dishaw, Plaintiff,
Vs.
Paul Dishaw, Defendant.

Suit pending in the Circuit Court for Livingston County, on the 1st day of July A. D. 1926.

It satisfactorily appearing to the Court by affidavit on file that a chancery summons has been issued out of and under the seal of said Court for the appearance of said defendant therein, and that the same could not be served on or before the return day thereof because that the said defendant, being a resident of said State of Michigan, was concealed therein or elsewhere, and said chancery summons having been returned with the certificate of the sheriff of said County thereon, indorsed showing that after diligent search and inquiry the said defendant could not be found in said State of Michigan on or before the return day of said summons, on motion of Willis L. Lyons, Attorney for said plaintiff it is ordered that the said defendant, Paul Dishaw, cause his appearance to be entered in said Court and cause within three months after the date of this order, and that in case of his appearance he cause his answer to the plaintiff's bill of complaint to be filed, and a copy thereof served upon the attorney for the plaintiff within twenty days after service upon him of a copy of said bill, and notice of this order, and that in default thereof, the said bill be taken as confessed by said defendant.

And on like motion, it is further ordered that within twenty days after the date hereof, the plaintiff cause a notice of this order to be published in the Pinckney Dispatch, a newspaper printed, published and circulated in said County of Livingston, and that such publication be continued once in each week for six weeks in succession, or that he cause a copy of this order to be personally served upon said defendant at least twenty days before the time herein prescribed for his appearance.

And on like motion, IT IS FURTHER ORDERED, that the said plaintiff cause a copy of this order to be mailed to said defendant at his last known post-office address, by registered mail, and a return receipt demanded, at least 80 days before the time herein prescribed for the appearance of said defendant.

J. B. MUNSELL,
Circuit Court Commissioner
WILLIS L. LYONS,
Attorney for Plaintiff.

R. E. Barron, Howell 2t

STATE OF MICHIGAN, The Probate Court for the County of Livingston.

At a session of said Court, held in the Probate Office in the City of Howell, in said County, on the 15th day of July A. D. 1926.

Present: Hon. Willis L. Lyons, Judge of Probate.

In the Matter of the Estate of NORMA LITCHFIELD, Deceased.

Paul William Curlett having filed in said Court his petition praying that the time for the presentation of claims against said estate be limited and that a time and place be appointed to receive, examine and adjust all claims and demands against said deceased by and before said Court.

It is Ordered, That four months from this date be allowed for creditors to present claims against said estate.

It is Further Ordered, That the 15th day of November 1926, at ten o'clock in the forenoon, at said Probate Office, be and is hereby appointed for the examination and adjustment of all claims and demands against said deceased.

Willis L. Lyons, Judge of Probate
